

# The Most Expensive Car Repairs - Part 2

---

 [junkcarchashout.com/index.php](http://junkcarchashout.com/index.php)

Most of us tend to think of our cars as an expensive investment, but, technically, your car isn't an investment at all since it starts to depreciate the moment you drive it off from the showroom. Nevertheless, you still need that vehicle to take you to work every day and help you run other errands. Just like any other mechanical machine, your car will eventually need repairs.

## ***Even the best-maintained cars that aren't too old will need repairs over time***

Unfortunately, car repairs aren't cheap. Every time you take your car to the auto repair shop, you rarely drive out without leaving behind a couple of hundred dollars. But, what are some of the most expensive car repairs? ***Here is a list of some of the most expensive auto repairs that you need to avoid at all costs.***

## Mass Air Flow Sensor

---

Your car's mass air flow sensor measures the amount of air that passes through to the engine and determines how much fuel to send to the engine. The leading cause of a faulty mass air flow sensor is poor air filter maintenance. For instance, ***if you fail to replace your air filters regularly, then you are causing harm to your mass air flow sensor.***

When the mass air flow sensor stops to function as expected, they will cause your "check engine light" to come on signaling a major problem with your car engine. To avoid this problem, make sure that you change your air filters regularly. ***While an air filter is cheap, replacing your mass air flow sensor can cost you a fortune.*** Replacing your mass air flow sensor will cost you between \$400 and \$600.

## Suspension

---

The primary purpose of the suspension is to hold your car together. It ensures that the harsh road conditions are kept outside where they belong and allows the passengers who are riding inside the car to feel comfortable even in rugged landscapes. A car's suspension system comprises of shocks, springs, control arms, struts, and tie rods.

All these components need to be in good condition to ensure that the suspension performs its function appropriately. If one of these components breaks down, you can replace it at an affordable cost, but things might become tough ***if the entire system needs an overhaul.***

To replace your entire suspension system, don't expect to spend anything less than \$3,600. However, make sure that you get a second opinion before you decide to splash that amount of money on your suspension overhaul. ***Some rogue mechanics will recommend a complete overhaul when only one part needs to be replaced.***

## Airbag Replacement

---

Any driver understands the importance of the airbag. This is one of the most critical components of your vehicle that is so critical in saving lives when an accident occurs. In fact, there is a law requiring all automotive manufacturers to include airbag in all of their models. If your car is involved in an accident and your airbag is damaged in the process, you will need to replace it. ***Replacing the airbag of your vehicle can cost as much as \$4,000 but is essential for the future safety of yourself and other passengers.***
